

SAP & GIS Integration

Synchronize SAP with ArcGIS

Many organizations rely heavily on SAP software for managing their business operations; including asset management, human resources, finance, sourcing and procurement. Often the same organization will find itself depending on a dedicated GIS software platform; such as ArcGIS. Working in these segregated environments unavoidably leads to duplicated effort, over complicated workflows, and other frustrating inefficiencies.

Though SAP and Esri have shared technology to simplify the synchronization between the two systems, successfully implementing these synchronizations has proven to be very difficult. Typically, half of the companies that attempt these projects fail to achieve a working synchronization. The harsh reality is that the existing synchronization tools between these two systems do not bridge the gap.

Custom software can fill in the gaps

Let us help you ensure a success synchronization by developing tailored applications and utilities that synchronize your data, your way.

The most effective strategy has been to use the web service SDKs (Software Development Kit) available from both SAP and Esri to develop custom web services that facilitate the flow of data between on system and the other. In between these custom web services is a custom data translation utility that translates the data between the two formats used by each of the systems.

MRF has years of experience performing system integrations just like these and unlocking efficiency in segregated enterprise systems.

About MRF

Founded in 1992, we have helped thousands of organizations solve common to complex workflow, coordination, and information management problems using GIS software and systems integration.

We do this by dedicating ourselves first to understanding the issues you are experiencing and then applying innovative combinations of our comprehensive spatial technologies to get you where you want to go.

Pricing

Integration projects present unique challenges and opportunities. We handle Systems Integration on a case by case basis to provide our customers with the best value available. Let us help provide a detailed assessment of your current GIS technologies with three levels of improvement suggestions complete with fixed prices. Choose your level of investment and regardless of whether or not you pursue any suggested improvements, the detailed assessment report is yours to keep. If you do proceed with any suggested improvements, the complete cost of your assessment will be applied to your improvement.

Sign up for a detailed assessment today at our promotional price of **\$1500**.
